SENATE

S. B. No. 950

Introduced by Senator Jinggoy Estrada

EXPLANATORY NOTE

In 1992, Republic Act 7431 was enacted in order to regulate the practice of radiologic technology in the Philippines. Through the law, the government sought to protect the public from hazards posed by radiation as well as to ensure sage and proper diagnosis, treatment, and research through the application of machines and/or equipment using radiation.

In order to uphold such policy, RA 7431 created the Board of Radiologic Technology composed of three (3) radiologic technologist, one (1) radiologist, and one (1) medical physicist.

However, including a radiologist and a medical physicist in the board defeats the intent of the law. Under the law, a radiologist is a licensed physician who specializes in the diagnosis or treatment of diseases with the use of radiation while a medical physicist specializes in the application of the principles and techniques of physics in medicine. These are entirely different from those who practice radiologic technology-related professions. Whereas this specific technology is an auxiliary branch of radiology which deals with the application of radio frequency rays in the diagnosis and treatment of diseases, this set up then does not call for representation of radiologists and medical physicists to the Board.

This proposed measure then seeks to address this loophole in the law by excluding the radiologist and medical physicist from the Board of Radiologic Technology. Also, the bill changes the scope of examinations in radiologic and x-ray technologist to more practical subjects with their corresponding weights also modified.

In view of the foregoing, passage of the bill is earnestly sought.
