

NINETEENTH CONGRESS OF THE)
REPUBLIC OF THE PHILIPPINES)
First Regular Session)

'22 JUL -7 P2 :58

SENATE

RECEIVED BY:

S. No. 128

Introduced by **SENATOR CYNTHIA A. VILLAR**

**AN ACT
REQUIRING NEW COMMERCIAL, INSTITUTIONAL, AND RESIDENTIAL
INFRASTRUCTURE PROJECTS IN METRO MANILA AND MAJOR CITIES IN
THE PHILIPPINES TO INSTALL RAINWATER HARVESTING OR RETENTION
FACILITIES, PROVIDING PENALTIES FOR VIOLATIONS, AND FOR OTHER
PURPOSES**

EXPLANATORY NOTE

Being an archipelago, the Philippines is abundant in water resources. And while the country, on account of its geographical location at the Pacific typhoon belt, is frequented by numerous typhoons that oftentimes wreak havoc to its residents, the same phenomena all together bring in torrential rainfall that continuously replenish our water resources.

And so, the dwindling water supply we experience nowadays, particularly in Metro Manila and neighbouring areas, is an ironic predicament given that heaps of rainwater are poured into the Philippine territory year in and year out. While a lot have surmised that the blame belongs to the government regulators and the concessionaires for the apparent lack of planning, foresight and infrastructures, resulting to the current deficient water supply; to my mind, I'd rather see the wisdom of considering the current predicament as an opportunity for us to rethink our current water conservation practices and to start with resourceful ways of conserving water, such as rainwater harvesting.

Rainwater harvesting as a way of conserving water is not a new concept or technology. Researches show that it was practiced during the ancient times as evidenced by the discovery of waterproof receptacles or cisterns to collect rain, which is traced back to the period of Neolithic Age (or around 10,000 BC to 4500 BC)¹. In India, a technique that has been used for hundreds of years is the building of water harvesting systems on top of the roofs of houses; it is a simple technology that has been replicated in countries, such as Brazil and China². In the Philippines, early use of rainwater harvesting is indicated by the presence of the Banaue rice terraces, believed to be built some two thousand (2,000) years ago by the Ifugao people.³ Thus, rainwater harvesting may be considered an ancient practice but it still finds relevance and practicality even in the present times, particularly given the increased extreme weather events (i.e. extreme heat, long periods of drought) brought by climate change.

There is so much potential to be gained in mainstreaming anew rainwater harvesting in the country. According to studies, the Philippines receives around 2,400 mm of rainwater annually, which is considered one of the highest level of rainfall; and yet, despite the abundant rainfall, the country's rainwater harvest is only about four percent (4%).⁴ This is measly compared to India's sixty percent (60%) rainwater harvest rate. The water that will be collected via rainwater harvesting is a welcome addition to our scarce water supply and could be very well used for household and other practical purposes.

The attached bill requires new commercial, institutional, and residential infrastructure projects in Metro Manila and major cities in the Philippines to install rainwater harvesting or retention facilities that will bring about an efficient conservation of water, which may be used for household, or other practical purposes and thereby help in addressing the shortage of water supply in Metro Manila and major cities in the Philippines.

I have first filed this bill in the 18th Congress, which is a counterpart of the bill filed by Representative Luis Raymund "LRay" F. Villafuerte Jr. of the Second District of Camarines Sur in the House of Representatives. I see the wisdom in having this bill passed into law.

In view of the foregoing, I recommend the immediate approval of this bill.

CYNTHIA A. VILLAR

NINETEENTH CONGRESS OF THE)
REPUBLIC OF THE PHILIPPINES)
First Regular Session)

'22 JUL -7 P2 58

SENATE

S. No. 128

RECEIVED BY:

Introduced by **SENATOR CYNTHIA A. VILLAR**

**AN ACT
REQUIRING NEW COMMERCIAL, INSTITUTIONAL, AND RESIDENTIAL
INFRASTRUCTURE PROJECTS IN METRO MANILA AND MAJOR CITIES IN
THE PHILIPPINES TO INSTALL RAINWATER HARVESTING OR RETENTION
FACILITIES, PROVIDING PENALTIES FOR VIOLATIONS, AND FOR OTHER
PURPOSES**

*Be it enacted by the Senate and House of Representatives of the Philippines in
Congress assembled:*

1 Section 1. *Short Title.* – This Act shall be known as the "Rainwater Harvesting
2 Facility Act".

3 Sec. 2. *Declaration of Policy.* – It is the declared policy of the State to
4 promote the health and welfare of its citizens, and exercise sufficient powers to
5 preserve the natural ecology within its territory. Further, it is the policy of the State to
6 provide adequate supply of clean and unpolluted water for domestic and for other useful
7 purposes. Thus, the State shall adopt practical measures that will efficiently conserve
8 water and help in addressing the deficient water supply in Metro Manila and other
9 major cities in the country.

10 Sec. 3. *Definition of Terms.* – As used in this Act, the following terms shall be
11 defined as:

12 a) *Department* refers to the Department of Public Works and Highways
13 (DPWH);

1 To conserve potable water, rainwater collected by a harvesting facility may
2 be used for non-potable and suitable purposes, such as gardening and air-cooling
3 processes.

4 It is the intent of the Act that the use of rainwater for non-potable uses
5 should not be constrained by standards for drinking water or recycled water but shall
6 fully comply with water quality requirements.

7 *Sec. 5. Design Approval.* – The provision for a rainwater harvesting facility
8 shall be required by the Department of Human Settlements and Urban Development
9 (DHSUD) and local government units (LGUs) to be incorporated in the design of all
10 new commercial, institutional, and residential development projects in Metro Manila
11 and other major cities, and project design shall be approved for construction unless
12 it includes such facility. The DHSUD and the LGUs shall ensure that these facilities
13 are built during the construction phase of the projects.

14 *Sec. 6. Design Requirements.* – The rainwater harvesting facility must be
15 designed to cope with a pre-determined flood and rain return period and must have
16 a storage capacity prescribed by the Department of Public Works and Highways
17 (DPWH). The design of the rainwater harvesting facility includes the following:

- 18 a) Size, shape and physical characteristics of available space;
- 19 b) Construction plans with specified material type including lining and
20 coating requirements;
- 21 c) Detailed drawing on how the installation will drain into an outfall
22 structure as a drywell or a percolation chamber, storm drain system,
23 drainage channel, or natural wash; and
- 24 d) Mechanism to exclude mosquitoes and not permit mosquito production.

25 *Sec. 7. Building Permits.* – If the design of a new commercial, institutional,
26 and residential project in Metro Manila and other major cities with an area of at least
27 one thousand five hundred (1,500) square meters does not provide for a rainwater

1 harvesting facility, the LGU concerned shall deny the request for issuance of a
2 building permit for such project.

3 Sec. 8. Reportorial Requirements. – The DPWH shall require the owner or
4 developer of all new commercials, institutional, and residential development projects
5 covered under this Act to submit a compliance report within 12 months from the
6 date of the completion of the project.

7 The DPWH shall henceforth require the building owners to submit an annual
8 report of the performance of such rainwater retention facility which may include, but
9 is not limited to information on the total volume of retained rainwater and its
10 utilization.

11 Sec. 9. *Penalties.* – The owner or developer of all new commercial,
12 institutional, and residential development projects in Metro Manila and other major
13 cities who fails to construct a rainwater harvesting facility in violation of Section 4 of
14 this Act shall suffer the penalty of a fine of not less than Five hundred thousand
15 pesos (Php500,000.00), but not more than Two million pesos (Php2,000,000.00) for
16 every year of non-compliance.

17 In the case of a partnership, association, corporation or any juridical person,
18 the fine shall be imposed upon the president, treasurer, or any officer or person
19 responsible for the violation.

20 If the offender is a foreigner, the foreigner shall be deported immediately
21 without further proceedings after payment of fine.

22 The head of the government institution who violates Section 4 of this Act, or
23 government officials, employees, and agents who issue licenses or permits in
24 violation of Section 8 of this Act, shall suffer the penalty of suspension of not less
25 than ten (10) days, but not more than one hundred eighty (180) days after due
26 notice and hearing in an appropriate administrative proceeding.

1 Sec. 10. *Implementing Rules and Regulations (IRR)*. – Within sixty (60) days
2 from the effectivity of this Act, the Department shall, in coordination with relevant
3 government agencies and other stakeholders, promulgate the rules and regulations
4 for the effective implementation of this Act. The implementing rules and regulations
5 shall include the standards and guidelines for the design, construction, installation,
6 materials, site selection and planning, site-specific considerations, and maintenance
7 of the rainwater harvesting facility.

8 Sec. 11. *Separability Clause*. – If any portion or provision of this Act is
9 declared unconstitutional or invalid, the remainder of this Act or any provisions
10 hereof not affected thereby shall continue to be in force and effect.

11 Sec. 12. *Repealing Clause*. – Any law, presidential decree or issuance,
12 executive order, letter of instruction, rule or regulation inconsistent or contrary to
13 the provisions of this Act is hereby repealed or modified accordingly.

14 Sec. 13. *Effectivity Clause*. – This Act shall take effect after fifteen (15) days
15 following its complete publication in the Official Gazette or a newspaper of general
16 circulation.

Approved,
