

developer closed shop. The potential user had to wait for the developer to reorganize its company in order to continue with the project. Another developer lacked the foresight of providing software support after it gave away its open source software for free to various local government units. Security wise, as the code is open, if anyone will gain access to it. A hacker can analyze the codes and find where the files are located, loopholes, and even design a bug if it gets installed in the system.

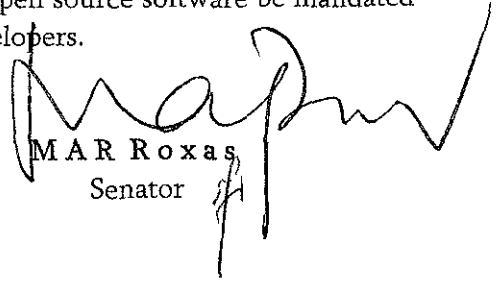

WHEREAS, despite these foreseen risks, other countries such as Peru, Finland, Germany, France, the United Kingdom, New Zealand, China, Taiwan, Korea, and Malaysia have expressed support for the use of open source software in their respective governments.

WHEREAS, currently, only a few Philippine government institutions use open source software. The Biotechnology-Intellectual Property Rights Training Center at the Philippine Rice Institute reported savings of Four Hundred Thousand Pesos (P400,000) in software costs by using open source applications. Units at the University of the Philippines (UP), such as the library of the College of Engineering, the Department of Computer Science, and the UP Computer Center, use open source software not only because of the lower cost compared to using proprietary software, but also because open source reduces instances of piracy and is less prone to virus attacks. Bayanihan Linux, an open source program developed by the Department of Science and Technology's (DOST) Advanced Science and Technology Institute (ASTI), has a target user base in state universities and local governments.

NOW THEREFORE, BE IT RESOLVED, AS IT IS HEREBY RESOLVED, that the Senate urge the Committee on Trade and Commerce to conduct an inquiry, in aid of legislation, into the viability of using open source software.

BE IT FURTHER RESOLVED THAT, the development of open source software be a mandated part of the computer science curriculum.

BE IT FINALLY RESOLVED THAT, the development of open source software be mandated part of the training programs of in-house government software developers.

MAR ROXAS
Senator
