EM 1710

SENATE
S. No. 2276

RECEIVED BY: 

Introduced by Senator Miriam Defensor Santiago

EXPLANATORY NOTE

Using cell phones near hospital beds or important equipment is dangerous and could switch off ventilators or disrupt pacemakers, Dutch researchers said on Thursday.

The University of Amsterdam researchers recorded nearly 50 incidents of electromagnetic interference from cell phone use in hospitals and classified 75 percent of them as significant or hazardous.

Because of this cell phones should come no closer than one meter to hospital beds and equipment, said the researchers who published their study in BioMed Central's online open access journal *Critical Care*.

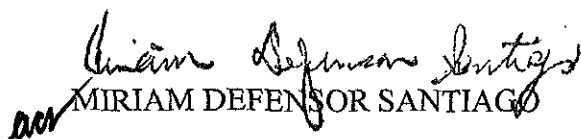

"Critical care equipment is vulnerable to electromagnetic interference by new-generation wireless telecommunication technologies with median distances of about 3 centimeters," they wrote.

The study contradicts a study earlier this year from researchers at the Mayo Clinic who found that 300 tests over a five-month period turned up no noticeable interference with important hospital equipment due to regular cell phone use.

The Dutch team -- which tested 61 different medical devices -- found that most of the incidents stemmed from the latest General Packet Radio Service (GPRS) signal, a new-generation technology that allows things such as wireless Internet access.

Other malfunctions they attributed to electromagnetic interference included complete stops with no alarms in syringe pumps and incorrect pulsing by an external pacemaker.*

Cellphones cause radio frequency interference not only with pacemakers but also other medical devices such as ventilators, patient monitors, neonatal infant warmers, motorized wheelchairs, and anesthesia delivery equipment.† Because of the possible RF interference of cellphones with the proper operation of medical devices and the consequent injury to the patients who rely on these, this bill seeks to prohibit the use of cellular or mobile telephones in certain public areas of hospitals, medical centers, or any other treatment center.
