S. No. **1696**

EXPLANATORY NOTE

Establishing computer literacy programs for students will help ensure that the nation's children are receiving the skills needed for advanced education and for securing employment in the 21 century.

Computer literacy skills, such as information gathering, critical analysis, and communication with the latest technology, build upon the necessary basics of reading, writing, mathematics, and other core subject areas.

Although an ever increasing amount of schools are obtaining the latest computer hardware, schools will not be able to take advantage of the benefits of computer-based learning unless teachers are effectively trained in the latest educational software applications.

Studies show that students whose teachers received training in computers performed better than other students. The study also found that schools that provide teachers with professional development in computers enjoyed higher staff morale and lower absenteeism rates.

The purpose of this Act is to enable Philippine schools to use computer hardware to increase student achievement and prepare students for the 21st century workplace.*
