Senate Bill No. 368

INTRODUCED BY SEN. JINGGOY EJERCITO ESTRADA

EXPLANATORY NOTE

A practical strategy endorsed by international organizations to combat hunger and eliminate or reduce malnutrition is the enrichment of bread and bakery products with key micro-nutrients. As early as the 1940's, the internationally-accepted standard for one (1) pound average loaf of enriched bread is that it should contain the minimum daily requirements of thiamine (B), riboflavin (B2), niacin, and Vitamin D. Originally, the aim of bread and bakery goods enrichment was to restore vital nutrients lost in the milling process. Today, enrichment of bread cereal products is to take advantage of bread being the basis or an integral part modern-day diet and optimize ingestion by food of these micro-nutrients by normal eating.

This measure aims to raise the health of our people, through optimal nutritious bread and bakery goods.

At the initiative of the baking industry itself and the Philippine Federation of Baker's Association, the industry wishes to contribute not only to the health of our people and protect consumer rights, but also for the purpose of efficient management, safety production and reasonable costs to maximize access to nutrients of bread and bakery products.

The baking industry as part of the food manufacturing sector is a significant component for socio-economic development. The organization of a Bakery Industry Development Board to promote health, protect consumer rights and upgrade the standards of bakeries is truly commendable.

This measure is a response to the need for improving the malnutrition of our children and youth, upgrading bakery standards, and setting a momentum to accelerate economic development through the baking industry.

The approval of this measure is urgent and needed for the health of our people and to support economic development through the baking industry.
