**EXPLANATORY NOTE**

It is the policy of the State to protect and promote the right to health of its people. This can be pursued by undertaking appropriate health manpower development which is responsive to the country's health needs and problems. Recently, there has been a resurgence of heart, kidney, and lung problems which have caused economic dislocation and the eventual curtailment of the enjoyment of productive and happy life.

Medical centers such as the Philippine Heart Center, the National Lung Center of the Philippines, the National Kidney Center, and the Philippine Children's Medical Center which provide specialized services were established individually and organized as government corporations which function independently of each other. Their services for patients and their teaching and research functions are pursued with minimum coordination, if any, among each other.

There is need therefore, to integrate and rationalize these specialty centers by establishing a Medical Center System that will consist of existing facilities in order to achieve a more effective and efficient implementation of resources and thereby improve the health care delivery system in the country.

Moreover, the proposed bill seeks to establish the Philippine Medical Center System to serve as a teaching, training and research institution for students of medicine and its allied fields, residents and post graduate fellows. This Philippine Medical Center shall be developed and maintained as a medical tertiary care institution to serve the public.

Approval of this bill is urgently requested.

  
RAMON BONG REVILLA, JR.
